Title : Homeade (Yugoslav) Creosote Oil of Coal Tar for Wood
Impregnation.

Orig Pub: Zeleznice (Jugosl.), 1957, 13, No 10, 19-22.

Abstract: The manufactured creosote oil had the following properties:
specific gravity at 20° - 1.105; moisture content - 0.3%,
pitch residue - 0.9; substances insoluble in benzene
- 0.11%; flash point according to Martens-Penski 113°.
The fraction composition and viscosity according to Eng-
ler at 20, 30, 50, 70 and 110° are given.

"Osteoid Osteoma"

Belgrade, Srpski arhiv za celokupno lekarstvo, Vol 93, No 9, Sep 65, pp 803-810.

Abstract/Authors' English summary modified: Osteoid osteoma is a tumor of a benign nature with special clinical characteristics. The inflammatory etiology of the lesion has never been confirmed, and it is difficult to prove that the lesion is the consequence of an earlier trauma fracture. It cannot be supposed that the lesion represents the rest of the embryonic tissue. The evolution of this lesion consists of an initial state with pronounced calcification which ends in the final state, in which osteoid osteoma is made of dense trabeculas of a calcificated atypical bone. Insignificant changes and the limited size of the tumor resemble those of other tumors of connective tissue. Osteoid osteoma represents a sui generis lesion, a specific tumor of benign nature which appears in osseous tissue. 18 Western references.

Title : Determination and Identification of "Amorpha Fruti-
cosa" Ethereal Oils.

Orig Pub: Acta pharmac. jugosl., 1957, 7, No 2, 111-117.

Abstract: The ethereal oil content was determined in fruits
and leaves of the A. fruticosa employing the im-
proved Klevenger's apparatus. The necessity of
coarse grinding of raw materials prior to distil-
lation and separation of ethereal oil was proved.
The duration of distillation is two hours. The
ratio of product/water is 1/20. Under the above

AUTHOR: Simić, Vladan

TITLE: Investigation of a uranium-bearing tectonic zone by means of the resistivity and radioactive emanation method

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 9, 1962, 26, abstract 9A171 (Radovi Sek. instraz. nukl. i radioaktivne emanacije, 1, no. 1, 1961, 97-104 (Serbo-Croat.; summary in Eng.))

TEXT: Uraniferous rocks of tectonic zones possess a better conductance than the surrounding rocks; this allows them to be revealed by means of the resistivity method. Uranium mineralization can also be exposed by means of the method of determining the radon concentration in soil air. It is possible, too, to determine approximately the uranium distribution and the nature of the mineralization (U, Th, U-Th) and to estimate approximately the degree of the mineralization. / Abstracter's note: Complete translation. /

AUTHOR: Simić, Vojislav, Doctor, Docent

TITLE: Determination of copper oxide (CuO) in the presence of elementary copper by X-ray diffraction without the use of standards

PERIODICAL: Tehnika, no. 9, 1962, 1770-1773

TEXT: The present work was carried out to develop a general method for the determination of CuO in the presence of Cu; experiments have shown that the same method can be used for a number of Cu compounds and minerals. A Berthold diffractometer with a Geiger counter and an automatic recorder were used measuring the intensity of the 2.31 Å line of CuO. The samples were prepared by an improved method of Kay. To reduce the variation in the absorption coefficient when CuO is present in smaller concentrations, 1 part by weight of Cu was added to 5 parts by weight of CuO contained in an amorphous mixture of CuO + SiO₂ mixture. It was found that the line intensity was a linear function of the concentration of the

Card 1/2

Determination of copper ...

determined substance. Compared with the internal standard methods the results obtained by the present method are higher by $\sim 3.5\%$ for the range 10 - 100% CuO. The following advantages are likely to offset the lower accuracy: (1) The possibility of using any inert substance with a relatively close mass absorption coefficient; (2) the possibility of adding any proportion of the inert substance; (3) the absence of a standard, in particular when substances with a large number of spectral lines are investigated, and (4) the saving of time. There are 3 figures and 2 tables. ✓

Magmatism and metallogenesis of Yugoslav granitic rocks and the tungsten deposits associated with them. V. Simić. *Vesnik savod. geol. geofiz. ist. Serbia* 10, 191-253 (1953) (German summary).—Granitic rocks of 3 geol. epochs occur in Yugoslavia. The Paleozoic and pre-Paleozoic granitic rocks have no ore deposits assocd. with them. The Hercynian granites occur mainly in the Rhodopes in Macedonia. With them are assocd. pegmatitic deposits, magnetite in contact deposits, and hydrothermal deposits contg. Bi, Au, Ag, and W. The Laramide granites are assocd. with important Pb-Zn deposits. Scheelite has been found at many localities in eastern Serbia in pegmatitic and pneumatolytic deposits, and especially in Au-bearing hydrothermal quartz veins. Michael Fleischer
